

In the Claims:

Please replace claim 1 and cancel claims 2-3 and 11-13, as shown below. All pending claims are reproduced below, including unchanged claims and marked up versions of amended claims.

1. (Amended) A method for formatting Web page information for providing to a display on a mobile device comprising the steps of:

initiating access to a Web page data file identified by a URL, access initiated by a user selection of the URL from the mobile device, wherein the Web page contains both content and links;

extracting the links from the content of the Web page, said extracting performed without receiving further input from a user; and

providing the links separately from the content for viewing on the display.

2. (Cancelled) A method for formatting Web page information for providing to a display comprising the steps of:

accessing a Web page data file identified by a URL, wherein the Web page contains both content and links;

extracting the links from the content of the Web page; and

providing the links separately from the content for viewing on the display, wherein the step of providing the links separately from the content comprises the steps of:

separating offsite links from the Web page identified by the URL from onsite links;

placing the offsite links into an offsite folder which may be opened to provide the offsite links to the display; and

providing the onsite links and the offsite folder for viewing on the display.

3. (Cancelled) A method for formatting Web page information for providing to a display comprising the steps of:

accessing a Web page data file identified by a URL, wherein the Web page contains both content and links;

extracting the links from the content of the Web page; and

providing the links separately from the content for viewing on the display, wherein the step of providing the links separately from the content comprises the steps of:

separating offsite links from the Web page identified by the URL from onsite links; and

providing the offsite links for viewing on the display in an offsite category separate from the onsite links.

4. (Original) The method of claim 1, wherein the step of providing the links separately from the content comprises the steps of:

determining if more than one of the links identifies a single destination, and if so providing only one of the links identifying the single destination to the display.

5. (Previously Amended) The method of claim 1, wherein the step of providing the links separately from the content comprises the steps of:

defining names for links identified by text in the Web page using at least a portion of the identifying text; and

defining names for links identified by a non-text image in the Web page by using at least a portion of text in an alternative (ALT) tag for the image if text is provided in an ALT tag associated with the image.

6. (Original) The method of claim 5, further comprising the step of:

defining names for links identified by non-text images in the Web page by using at least a portion of a URL code for the link when no text is provided in the ALT tag for the image.

7. (Original) The method of claim 5, further comprising the step of:
defining names for links identified by non-text images in the Web page by using content of documents accessed using the links when no text is provided in the ALT tag for the image.
8. (Original) The method of claim 7, wherein the content of the documents accessed using the link are titles.
9. (Previously Amended) The method of claim 5, further comprising the step of:
defining names for links identified by non-text images in the Web page by using identifications for the links obtained from offsite documents when no text is provided in the ALT tag for the image.
10. (Original) The method of claim 1, wherein the step of providing the links comprises the step of:
arranging an order of the links for viewing on the display based on a structure of the Web page.
11. (Cancelled) A method for formatting Web page information for providing to a display comprising the steps of:
accessing a Web page data file identified by a URL, wherein the Web page contains both content and links;
extracting the links from the content of the Web page; and
providing the links separately from the content for viewing on the display, wherein the step of providing links comprises the step of:
arranging an order of the links for viewing on the display based on an order of frames identified by the links in the Web page.

12. (Cancelled) A method for formatting Web page information for providing to a display comprising the steps of:

accessing a Web page data file identified by a URL, wherein the Web page contains both content and links;

extracting the links from the content of the Web page; and

providing the links separately from the content for viewing on the display, wherein the step of providing links comprises the step of:

arranging an order of links for viewing on the display based on which of the links has been followed the greatest number of times.

13. (Cancelled) A method for formatting Web page information for providing to a display comprising the steps of:

accessing a Web page data file identified by a URL, wherein the Web page contains both content and links;

extracting the links from the content of the Web page; and

providing the links separately from the content for viewing on the display, wherein the step of providing links comprises the step of:

arranging an order of links for viewing on the display based on which of the links has been most recently followed.

14. (Previously Amended) The method of claim 1, wherein the mobile device consists of one or more of the following:

an Internet phone;

a personal digital assistant; and

a two way pager.

15. (Original) The method of claim 1, wherein the links are categorized as first links, the method further comprising the steps of:

accessing a second Web page data file identified by a second URL, wherein the Web page contains both content and links;

extracting the links from the content of the second Web page to provide second links; and providing the second links with the first links for viewing on the display.
